

Earth

Solar System

Our solar system is a vast and fascinating expanse, comprising eight planets, five dwarf planets, numerous moons, asteroids, comets, and other celestial bodies. At its center lies the star we call home: the Sun, a massive ball of hot, glowing gas that provides light and warmth to our planet.

For more details see Chapter 1!

Earth

Earth is the third planet from the Sun. It's our home planet. Earth is the only place we know of with life.
